Being watersmart to me is saving water for other living things in the world because we only have so much water in the world right? Wrong! We don't. Our water is going to waste because it is being used for unuseful reasons. Make sure your showers are no longer than five minutes — your probably wondering how taking a shower has anything to do with saving water. Well, if you take even a 20 minute shower, you are using 100 gallons of water! So just a tip, sing your a,b,c's at dinner time instead of in the shower. So please, try to take your showers in under five minutes. Turn off the water when you are brushing your teeth, to. This way your breath is minty fresh, and your saving water. Use refillable water bottles, and when you drink out of regular water bottles, make sure the plastic doesn't travel off into the sea. These are just some of my thoughts on how to be watersmart. I hope you follow these useful ideas so that our Earth, water, and environment doesn't go to waste before we expect it to.
