The San Diego County Water Authority will soon begin a water relining project near you. The project will rehabilitate more than four miles of large-diameter pipeline between Lake Murray and Sweetwater Reservoir. Improvements to existing pipeline access structures will also be part of this project.

Relining work is done by accessing the underground pipe through portals, which are excavated 25-foot-by-60-foot areas. Most of the portals will be surrounded by temporary, tall wooden soundwalls. Much of the construction work will be located underground, within public street and Water Authority rights-of-way. Visit www.sdcwa.org/LM-Sweetwater-Relining for a map of the work site location nearest you.

**Schedule and Work Hours:**
Fall 2017 through Summer 2018
Monday through Saturday 7 a.m. to 7 p.m.
Some nighttime work may occur to install traffic detours and to repave roadways.
CONSTRUCTION NOTICE

PROJECT BENEFITS:
• Extends pipeline’s service life
• Ensures water system reliability
• Less impactful to community and environment
• Costs less than other repair methods
