Water pipeline relining work is taking place in an area at the Sweetwater Summit Regional Park. The work is part of a San Diego County Water Authority project that is scheduled to be complete by the end of June 2018. The Water Authority is rehabilitating more than four miles of large-diameter pipeline between Lake Murray and Sweetwater Reservoir. The relining process is more cost-effective and less intrusive than replacing the pipeline and helps ensure a safe and reliable water supply for our region's future.

**PROJECT BENEFITS:**
- Extends pipeline's service life by 75 years
- Ensures water system reliability
- Less impactful to community and environment
- Costs less than other repair methods
